

Hazem Lenin

Mid-Senior Full Stack Developer

hazemlenin@gmail.com • +201002353194 • Egypt • [linkedin.com/in/hazem-lenin](https://www.linkedin.com/in/hazem-lenin) • [hazemlenin.github.io](https://github.com/hazemlenin)

SUMMARY

Full Stack Developer with 4+ years of experience owning complex modules end-to-end in enterprise B2B systems — from .NET Core API design and Clean Architecture to Angular frontend and production mobile apps. Known for going beyond delivery: restructuring frontend monorepos, implementing MFA flows from scratch, building developer tooling adopted company-wide, and contributing to engineering culture through mentoring, knowledge-sharing sessions, and the company's official engineering competency matrix.

WORK EXPERIENCE

Full Stack Developer | **GAMP · IT Services & Software Development, Poland** *Mar 2024 – Present*

- Mid-Senior developer on GapMap, a modular B2B partition management platform serving enterprise clients in Poland (Renk, ZRRT); owned the Contractors module end-to-end across .NET Core API and Angular — domain modelling, EF Core schema, API design, and UI components
- Designed and implemented full-stack features including MFA (Identity Server integration, recovery codes flow), PayU payment integration, subscriptions, shipment, a cross-platform feature-toggle system, and raw TCP socket communication with ethernet-connected printers for direct command dispatch
- Solely owned the entire mobile project: designed, built, and shipped GapMap and eZRRT (Capacitor + Angular + Trapeze) including FCM push notifications, splash screens, safe area and color palette setup, multi-app native config, Fastlane CI/CD deployment, and managed both Google Play and Apple App Store releases
- Co-led a 2-month frontend restructure consolidating 2 large Angular apps (5 modules total) into an Nx monorepo with a shared component library — significantly reducing duplication and enabling consistent architecture across admin, portal, and parking bridge
- Applied Clean Architecture, Repository pattern, CQRS (MediatR), and SignalR across .NET Core services; set up Playwright e2e testing infrastructure and maintained test coverage alongside feature work
- Diagnosed and resolved a critical calendar performance bottleneck by redesigning the API and optimizing DB queries, reducing load time by ~70%
- Mentored 3 junior developers through structured code reviews and pair programming; conducted 2 technical interviews; delivered company-wide knowledge-sharing sessions on task prioritization and AI-assisted MR workflows — recognized as the best KS session by the company
- Volunteered to co-author the company's official engineering competency matrix defining role levels and salary bands across dev, QA, and PO tracks

Full Stack Developer | **Pixel Academy**

Oct 2021 – Mar 2024

- Architected and built multiple e-learning platforms from the ground up using Django REST Framework — responsible for API design, data modelling, and backend architecture decisions
- Designed and delivered a full learning center management system covering appointments, scheduling, pricing rules, and financial reporting
- Delivered frontend features across React, Vue.js, and Next.js depending on project requirements

OPEN SOURCE PROJECTS

Merge Polisher | github.com/HazemLenin/merge-polisher

2024 – Present

- An AI-powered GitLab/GitHub CI tool that automatically polishes MR/PR descriptions, posts inline code review suggestions, and generates a confidence score based on coverage of critical code paths

- Built in Python with a clean layered architecture (adapters, domain, application, core); supports marker-driven behavior, retry/fallback LLM handling, and Docker deployment
- Supports both GitLab and GitHub providers; uses Gemini API for LLM inference; ships with GitHub Actions CI and automated Docker image publishing

EDUCATION

B.Sc. Management Information Systems (MIS)

Graduated 2025

Faculty of Business, Alexandria University • Grade: 3.69 / 4.0

Relevant coursework: Statistics, Accounting, Data Analysis, Business Intelligence, Cloud Computing, Databases, Software Design

TECHNICAL SKILLS

Backend	.NET Core (Clean Architecture, CQRS/MediatR, SignalR), Django (Python), REST APIs
Frontend	Angular (Signals, Standalone Components), React, Vue.js, Next.js, Redux
Mobile	Capacitor, Angular, Trapeze (multi-app native config)
DevOps	GitLab CI/CD, Fastlane, Docker, App Store Connect (iOS), Google Play Console
Other	Python, LLM APIs (Gemini), SQL, Git, Playwright (e2e)
Languages	Arabic (native), English (professional)

CERTIFICATIONS & ACTIVITIES

Software Design and Architecture Specialization • University of Alberta / Coursera

Coding Instructor (Volunteer) • Semicolon
